

Status of Fluoridation in the United States*

More than 184 million U.S. residents – approximately 70% of the U.S. population - are served by water supplies in which the fluoride concentration has been adjusted to an optimal level or the natural fluoride content is sufficient to prevent tooth decay, according to 2006 data from the Centers for Disease Control and Prevention (CDC).

The Healthy People 2010 Objective 21-9 states that at least 75% of the U.S. population served by community water systems should be receiving the benefits of optimally fluoridated water by 2010. In 2006, 25 states met this objective.

* Centers for Disease Control and Prevention. Populations Receiving Optimally Fluoridated Public Drinking Water — United States, 1992–2006. MMWR 2008;57:737-41.
