Nomenclature / Title (additions in <u>blue underline</u> ; deletions in <del>red strike-through</del> )										
<u>crack support for cracks that cannot removed completely in vital teeth</u>										
Descriptor / Text (additions in <u>blue underline</u> ; deletions in <del>red strike-through</del> )										
<u>Some cracks into dentin go vertically toward the pulp so tooth anatomy dictates how far you can go. Less than 5mm from occlusal table and 3mm from the periphery of the tooth on clinically vital tooth. If the crack still is present and going any further would expose the pulp then proper advanced adhesive protocols should be followed with caries removal, creating a bondable surface, CHX, IDS, secure bond and lay fibers over the crack to support the crack. Then the tooth can be restored with SRDC, or an adhesive biobase with an indirect adhesive restoration.</u>

Nomenclature / Title (additions in <u>blue underline</u> ; deletions in <del>red strike-through</del> )										
<b>bone replacement graft – <u>retained natural tooth</u> – first site in quadrant</b>										
Descriptor / Text (additions in <u>blue underline</u> ; deletions in <del>red strike-through</del> )										
This procedure involves the use of grafts to stimulate periodontal regeneration when the disease process has led to a deformity of the bone. This procedure does not include flap entry and closure, wound debridement, osseous contouring, or the placement of biologic materials to aid in osseous tissue regeneration or barrier membranes. Other separate procedures delivered concurrently are documented with their own codes. <u>Not to be reported for an edentulous space or an extraction site.</u>
