**Please read the DQA Measures User Guide prior to implementing this measure.**

DQA Measure Technical Specifications: Administrative Claims-Based Measures

Utilization of Services, Dental Services

**Description:** Percentage of children under age 21 who received at least one dental service within the reporting year

**Numerator:** Unduplicated number of children who received at least one dental service

**Denominator:** Unduplicated number of children under age 21

**Rate:** NUM/DEN

**Rationale:** Dental caries is one of the most common chronic diseases in children in the United States (1). For 2015–2016, prevalence of total caries (untreated and treated) was 45.8% and untreated caries was 13.0% among youth aged 2–19 years (2). Identifying caries early is important to reverse the disease process, prevent progression of caries, and reduce incidence of future lesions. In 2014, 52% of all children and 60% of poor children (FPL<100%) did not have a dental visit during the year (3). This measure allows assessment of whether a child received any dental services during the year and, therefore, also measures access to oral health care. The Institute of Medicine identified improving access to oral health care as a “critical and necessary first step to improving oral health outcomes and reducing disparities (4)."

**National Quality Forum Domain:** Process

**Institute of Medicine Aim:** Equity

**National Quality Strategy Priority:** Health and Wellbeing

**Level of Aggregation:** Health Plan/Program

**Improvement Noted As:** In general, a higher score indicates better performance. Contextual information relating to the overall health status of the population is also useful in interpreting measure scores. The measure can also be very useful longitudinally to monitor change over time for a particular program or plan.

**Data Required:** Administrative enrollment and claims data; single year. When using claims data to determine service receipt, include both paid and unpaid claims (including pending, suspended, and denied claims).
**Measure purpose:** Examples of questions that can be answered through this measure at each level of aggregation:

1. What percentage of children received at least one dental service during the reporting period?
2. Over time, does the percentage of children who receive at least one dental service stay stable, increase, or decrease?

**Applicable Stratification Variables**

1. Age: <1; 1-2; 3-5; 6-7; 8-9; 10-11; 12-14; 15-18; 19-20

**Utilization of Services Calculation**

1. Check if the subject meets age criterion\(^2\) at the last day of the reporting year:\(^3\)
   a. If age criterion is met, then proceed to next step.
   b. If age criterion is not met or there are missing or invalid field codes (e.g., date of birth), then STOP processing. This subject is not counted in the denominator.

2. Check if subject is continuously enrolled for at least 180 days during the reporting year:\(^4\)
   a. If subject meets continuous enrollment criterion, then include in denominator; proceed to next step.
   b. If subject does not meet enrollment criterion, then STOP processing. This subject is not counted in the denominator.

**YOU NOW HAVE THE DENOMINATOR (DEN) COUNT: All subjects who meet the age and enrollment criteria**

3. Check if subject received any dental service during the reporting year:
   a. If [CDT CODE] = D0100 – D9999, AND
   b. If [RENDERING PROVIDER TAXONOMY] code = any of the NUCC maintained Provider Taxonomy Codes in Table 1 below:\(^5\)
   c. If both a AND b are met, then include in numerator; proceed to next step.
   d. If either a OR b is NOT met, then a dental service was not provided; STOP processing. This subject is already included in the denominator but will not be included in the numerator.

**YOU NOW HAVE NUMERATOR (NUM) COUNT: Subjects who received a dental service**

---

\(^2\) **Age:** Medicaid/CHIP programs use under age 21 (<21); Exchange quality reporting use under age 19 (<19); other programs check with program officials. The age criterion should be reported with the measure score.

\(^3\) **Medicaid/CHIP programs should exclude those individuals who do not qualify for dental benefits.** The exclusion criteria should be reported along with the number and percentage of members excluded.

\(^4\) **Enrollment in “same” plan vs. “any” plan:** At the state program level (e.g., Medicaid/CHIP) a criterion of “any” plan applies versus at the health plan (e.g., MCO) level a criterion of “same” plan applies. The criterion used should be reported with the measure score. While this prevents direct aggregation of results from plan to program, each entity is given due credit for the population it serves. Thus, states with multiple MCOs should not merely “add up” the plan level scores but should calculate the state score from their database to allow inclusion of individuals who may be continuously enrolled but might have switched plans in the interim.

\(^5\) **Identifying “dental” services:** Programs and plans that do not use standard NUCC maintained provider taxonomy codes should use a valid mapping to identify providers whose services would be categorized as “dental” services. Stand-alone dental plans that reimburse ONLY for services rendered by or under the supervision of the dentist can consider all claims as “dental” services.
4. Report
   a. Unduplicated number of subjects in numerator
   b. Unduplicated number of subjects in denominator
   c. Measure rate (NUM/DEN)
   d. Rate stratified by age

### Table 1: NUCC maintained Provider Taxonomy Codes classified as “Dental Service”*

*Services provided by County Health Department dental clinics may also be included as “dental” services.

+Services provided by independently practicing dental hygienists should be classified as “oral health” services and are not applicable for this measure.

*** Note: Reliability of the measure score depends on the quality of the data elements that are used to calculate the measure. The percentages of missing or invalid data for each data element used to calculate the measure must be investigated prior to measurement. Data elements with high rates of missing or invalid data will adversely affect the subsequent counts that are recorded. For example, subjects who have records with missing or invalid CDT CODE may be counted in the denominator but not in the numerator. These records are assumed to not have had a qualifying service. In this case, a low-quality data set will result in a measure score that will not be reliable.***
Check age eligibility

No/ Missing/ Invalid field codes

Qualifying age at last day of reporting year?

Yes

Continuously enrolled for at least 180 days?

Yes

NC
Not Counted

Medicaid/CHIP use < 21; Exchange plans use <19; others consult program officials.

DEN: all subjects who meet the age and enrollment criteria

Dental Service?

Yes

NUM: subjects who had a dental service

STOP
Dental Quality Alliance Measures (Measures) and related data specifications, developed by the Dental Quality Alliance (DQA), are intended to facilitate quality improvement activities. These Measures are intended to assist stakeholders in enhancing quality of care. These performance Measures are not clinical guidelines and do not establish a standard of care. The DQA has not tested its Measures for all potential applications. Measures are subject to review and may be revised or rescinded at any time by the DQA. The Measures may not be altered without the prior written approval of the DQA. The DQA shall be acknowledged as the measure steward in any and all references to the measure. Measures developed by the DQA, while copyrighted, can be reproduced and distributed, without modification, for noncommercial purposes. Commercial use is defined as the sale, license, or distribution of the Measures for commercial gain, or incorporation of the Measures into a product or service that is sold, licensed or distributed for commercial gain. Commercial uses of the Measures require a license agreement between the user and DQA. Neither the DQA nor its members shall be responsible for any use of these Measures.
