        District, Potosi, River Falls, Sturgeon Bay
West Virginia  Milton Water, Point Pleasant Water Works, Summersville
        Water Works

2013 Fluoridation Merit Awards
presented to
The Children's Dental Health Project and
The Campaign for Dental Health

With this award, the ASTDD Fluorides Committee recognizes the outstanding
contributions of two organizations as we seek to maintain and expand the benefit
that community water fluoridation provides.

We are pleased to recognize the Children's Dental Health Project, whose
goals include the prevention of childhood tooth decay and the promotion of
solutions that are grounded in the best available research, for bringing the
Fluoride Legislative User Information Database, or "FLUID," to fruition, and for
their continuing enthusiasm and support. FLUID is the first publicly available
database on the legal status of community water fluoridation in the US. A
comprehensive resource containing historical information on legal cases decided by
US courts, it stays up to date with current information on federal and state
policies about fluoridation. This was a collaborative undertaking. It was first
conceived by a staff person at the ADA, and then developed further in
collaboration with the City University of New York/Hunter College School of
Nursing, staff in the CDC’s Division of Oral Health, and Marcy Frosh of CDHP.
With continuing support by the CDC, it is now maintained in partnership with
American University's Washington College of Law. FLUID is often used by
stakeholders in defending and promoting community water fluoridation and is
recognized as an authoritative resource.

We are also pleased to recognize the Campaign for Dental Health, first
developed and then launched by the Pew Children's Dental Campaign, and now an
entity and growing force itself. The Campaign for Dental Health was created "to
ensure every American has access to the cheapest, most effective way to
protect teeth - water fluoridation." It has created a largely volunteer network of
local children's and oral health advocates, health professionals and scientists who
work together to preserve our nation's gains in oral health. The Campaign's
mission is to provide reliable scientific information about oral health and
community water fluoridation. In so doing, it has also sought out and developed
tools, such as an interactive website, and resources of great value to us all. The
Campaign for Dental Health has also been a collaborative undertaking, involving
many organizations and individuals across the country.
