

Status of Fluoridation in the United States

April 2018

In 2014, approximately 74.4% of the U.S. population (211.1 million people) served by public water systems received the benefit of optimally fluoridated water.¹ This translates to an additional 700,000 million people receiving the benefit of fluoridated water since 2012 continuing the historic growth of fluoridation.²

Healthy People 2020 Objective 13 states that at least 79.6% of the U.S. population served by community water systems should be receiving the benefits of optimally fluoridated water by 2020.³
